For Earth, For Life Kubota

FC2

KUBOTA FC2 Series

#Comfort

Simplicity is the key

The engineering mandate was to produce a machine to complement the Kubota center collect front mower range with simplicity a key request.

Key design changes has significantly

Key design changes has significantly reduced the number of wearing parts and maintenance requirements.

Simplicity at its best.

Direct channelling of the grass

The direct discharge of cuttings from the deck to collector is a major change in terms of simplicity and reduced number of components required.

Hydraulic drive to the mower decks

Hydraulically driven decks is another key area in terms of simplicity. Gone are the belts and cardan shafts. Replaced by hydraulic hoses and a hydraulic motor. Attach and detach the implement becomes a breeze!

#Highlights

Curved backrest seat _____

Dependability and comfort. The perfect combination

The Kubota name is synonymous with dependability and reliability. Most of the components fitted to the FC2-221 are manufactured in-house which means quality control checks are carried out internally and not reliant on the supplier.

Deluxe seat

The seat features a high backrest with fore/aft seat position adjustment and wipe-clean plastic cover.

Adjustable soft-grip steering wheel Fore/aft steering wheel adjustment and steering drive knob further adds to the overall driving comfort.

#Performance

Performance

Powered by a Kubota D902 engine producing 22HP. The size and weight of the engine fits perfectly into the dimensional design criteria.

Low maintenance requirements

A self-cleaning cyclone pre-filter prevents the heavier dust and debris entering the air cleaner, whilst a radiator screen provides extra protection.

8 FC2-221 -

PTO engagement switch directly engages hydraulic drive to the front deck. No replacing or tensioning of belts, no greasing the cardan shaft or other maintenance within this area.

Right-hand controls fall easily to hand and operate at a comfortable working height. Operation of the deck and collector is done with ease and precision.

Constant grip

The 4WD ensures maximum traction on sloping terrain. The differential lock allows to quickly react to prevent wheel slip or damage the turf.

Rocker pedal drive control could not be easier. Simply press the forward part of the pedal and the HST transmission will take you to your required speed. Infinitely variable speeds are available up to 10 km/h. For reverse use the rear portion of the pedal. The smoothness and reaction of the transmission allows you to alter your speed to suit the varying ground conditions.

HTC (Hydrostatic Traction Control)

The HTC provides permanent traction and Independent control of the speed of the front and rear axle. This prevents the wheels from damaging the turf whilst turning through skids and slippage.

Hydraulic power steering

Quick and easy turning of the steering wheel allows effort-free turning when mowing around trees and other obstacles.

#Grass collector

Collector

Parallelogram lift

Raising of the collector is done using a parallel lift design.

This type of system not only makes the lift more stable, but also more effective in terms of vision and control.

Collector key points

Moulded from robust polymeric material.

Patented design optimises the collection area and grass compaction.

• A hinged metal flap allows air flow during operation to guarantee complete filling.

480 litres collectorA high lift grass collector ensures you can tip the grass into a waiting trailer or on top of an existing pile. Single lever operation of the raise/lower and tip. When the collector is fully raised, continuing to operate the lever allows the tip procedure.

Power and precision in front of your eyes

Mounting a deck forward of the machine brings numerous advantages in terms of operation.

- Better cutting quality. The grass is not run over before cutting.
- Better visibility and comfort for the operator.
- Better manoeuvrability and cutting in areas that cannot be accessed by mid-mount decks.
- Better adaptation to the ground contours, for more precise cutting.

14 FC2-221 -

Deck control and operation

The mounting points of the mower deck allows the deck to smoothly adapt to ground contours for a more uniform cut. Cutting height setting is done by a single lever adjustment whilst the raise and lowering is hydraulically controlled.

Solid rubber front wheels

Maintenance-free solid rubber deck tyres prevent bulldozing of the front deck. These wheels are positioned so there is no restriction to the grass flow into the cutting blades.

Rotary mower

A 112cm (44") rotary mower is ideally matched to the machine in terms of size and cutting throughput. The twin rotors with blade overlap not only ensures a precise cut, but also prevents grass and soil build-up within the housing.

An optional mulching kit is available for this deck.

Flail mower (3 in 1 mower)

A 110cm (43") flail mower is available. The deck has a choice of blades to handle a variety of conditions.

For cutting fine grass spoon or paddle shaped blades are fitted. For clearing longer rough grass areas Y-blades are the answer. By adding vertical blades, combined with the previous ones, it aerates the ground while working.

Patented knife removal
The "Smart System" has an innovative magnetic pin which allows quick and easy blade change.

Folding blades
A folding system protects the blade edge against obstacles.

#Attachments

Weed brush		
Brush diameter	67 cm	
Brush angle adjustment	Up to 90o hydraulic adjustment to the right	
Dimensions (L/W/H)	140 / 110 / 55cm	
Weight	77kg	

Hydraulically lifted and angled Compact and able to operate in areas larger machines cannot access.

Snow blade		
Working width	120 cm	
Hydraulic adjustment	30o adjustment left / right	
Dimensions (L/W/H)	115 / 111 / 40cm	
Weight	72kg	

18 FC2-221 -
